

CAPABILITY STATEMENT / 2026

**WE INSTALL
WHAT KEEPS
INDUSTRY
MOVING.**

REAL SITES. PRACTICAL LEADERSHIP. ACCOUNTABLE DELIVERY.

Australia's Industrial Installation Specialists

MECHANICAL INSTALLATION / STRUCTURAL STEEL
PROCESS PIPEWORK / SHUTDOWNS & MAINTENANCE

AUSTRALIA-WIDE MOBILISATION

jjdsindustries.com.au

BUILT FOR THE WORK.

STEEL. MECHANICAL.
PROCESS.

01 / INTEGRATED CAPABILITY

Your scope. Our site know-how.

JJDS Industries delivers mechanical installation, structural steel, process pipework, shutdowns and industrial installation packages for EPC contractors, principal contractors and asset owners across Australia.

SIX CAPABILITIES. ONE DELIVERY PARTNER.

01 Industrial plant installation

Installation packages for process equipment, skids, conveyors, pumps, tanks, vessels and production systems.

02 Mechanical construction

Equipment placement, alignment and assembly; commissioning support, upgrades and brownfield modifications.

03 Process pipework

Stainless steel, carbon steel and HDPE systems, with pipe supports, testing and handover support.

04 Structural steel

Platforms, access steel, support frames, pipe racks, stairs, handrails and structural modifications.

05 Shutdowns & maintenance

Planned shutdowns, breakdown response, replacement works, plant improvements and critical-path support.

06 HSEQ & quality delivery

Project-specific SWMS, ITPs, permits, inspections, progress records, variations and completion documentation.

AUSTRALIA-WIDE. SITE-READY. JJDS.

THE INSTALLATION SCOPE.

Mechanical equipment, process systems and steelwork brought together as practical site installation packages for new facilities, plant upgrades and operating assets.

Mechanical & rotating equipment

Placement, assembly, alignment and mechanical completion for process equipment and packaged systems.

- Pumps, motors and drives
- Skids, tanks and vessels
- Commissioning assistance

Conveyors & material handling

Mechanical and structural installation for conveyor systems, transfer interfaces and plant upgrades.

- Frames, rollers, belts and drives
- Guarding, platforms and supports
- Adjustment and alignment support

Process pipework & tie-ins

Stainless steel, carbon steel and HDPE systems with site fabrication and installation support.

- Piping, fittings and supports
- Plant modifications and tie-ins
- Testing and inspection support

Pump stations & water assets

Installation and upgrade packages combining mechanical equipment, pipe systems and access structures.

- Pump, motor and base installation
- Suction and discharge pipework
- Valves, frames and access steel

Structural & access steel

Site measure, fabrication and installation support for industrial structures and equipment interfaces.

- Frames, platforms and pipe racks
- Stairs, handrails and brackets
- Structural modifications

Field welding & rectification

Boilermaker-led site welding, fabrication repairs and structural or mechanical modifications.

- On-site fabrication and repairs
- Custom supports and steelwork
- Breakdown and shutdown support

BUILT AROUND YOUR SITE.

JJDS supports EPC and principal contractors, consulting engineers, councils and asset owners with coordinated installation, practical supervision and clear project communication.

Waste & resource recovery

Installation support for organics, recycling and waste facilities, including process and biofilter systems.

- Depackers and process equipment
- Ducting, pipework and steelwork
- Fabrication and plant modifications

Water & wastewater

Mechanical and installation support for water treatment, pump stations and industrial water systems.

- Pumps, skids and process pipework
- Supports and access structures
- Testing and handover assistance

Shutdowns & maintenance

Coordinated supervision and trades for planned outages, plant repairs and time-critical installation.

- Work-front planning and sequencing
- Replacement and overhaul support
- Daily progress and completion records

Brownfield plant upgrades

Staged works around access restrictions, operational interfaces, live services and shutdown windows.

- Equipment replacement and tie-ins
- Steel and access modifications
- Variation and as-built records

Civil & bridge infrastructure

Site support for bridge component works, structural repairs, culvert relining and drainage upgrades.

- Site welding and steel replacement
- Regional infrastructure support
- Delivery and compliance records

Remote & regional delivery

Mobile crews for difficult-access projects requiring mechanical, steel, pipework and civil support.

- Mobilisation and site coordination
- Shutdown and upgrade packages
- RFQ-to-handover communication

BEYOND THE CRANE. EXPERIENCE ON THE GROUND.

JJDS has experience working around helicopter lift operations on site. Our role is in the agreed ground-based construction and installation scope. JJDS does not provide helicopter operators or perform aviation operations.

Where the crane's reach ends, the sky opens a way.

Experience alongside aerial lifts

Familiarity with working on sites where specialist aviation providers carry out helicopter lifting.

- Ground-based site experience
- Working alongside specialist teams
- Construction and installation context

Understand the site interfaces

Coordinate the agreed JJDS work scope with the client, site management and appointed aviation provider.

- Clear division of responsibilities
- Installation access and sequencing
- Defined work-area interfaces

Construction preparation

Prepare the agreed fabrication and installation works to suit the project delivery sequence.

- Component and connection readiness
- Site fabrication and modifications
- Installation documentation

Work within site controls

JJDS personnel follow the project and aviation provider requirements relevant to their assigned work.

- Site briefings and communication
- Access and exclusion-area controls
- Work timing agreed with site leads

Installation after delivery

Undertake agreed mechanical and structural installation when components are released for that work.

- Fit-up and assembly
- Welding and structural connections
- Inspection and handover records

Aviation remains specialist-led

Helicopters, pilots, flight operations and aerial-lift planning are provided and controlled by others.

- No JJDS helicopter operators
- No JJDS aviation service offering
- Ground scope agreed per project

CONTROLLED. DOCUMENTED. READY FOR HANDOVER.

Project controls form part of delivery from scope review to closeout. Documentation and inspection requirements are defined for the agreed package and site requirements.

Scope & commercial clarity

Review drawings, specifications, interfaces and programme requirements before mobilisation.

- Defined inclusions and exclusions
- Assumptions and risk notes
- RFQ review and installation input

Safety & mobilisation

Project-specific preparation supports safe work fronts, competent supervision and coordinated site activity.

- SWMS and risk controls
- Permits, pre-starts and site records
- Contractor mobilisation documents

Inspection & quality records

Inspection and Test Plans and installation checks support verification of the agreed works.

- Inspection and test records
- Traceability where required
- Photos and completion evidence

Progress & change control

Clear reporting keeps project teams informed of work completed, interfaces and scope changes.

- Daily records and progress photos
- Variation and scope-change records
- Work-front coordination

Completion & handover

Closeout support helps the client move from installation into commissioning and operation.

- Punch-list closeout
- Marked-up and as-built records
- Commissioning support

Start with a clear RFQ

Send the project scope, drawings, specifications, photos and programme for practical delivery review.

- Site location and access conditions
- Required shutdown or delivery dates
- Documentation requirements

PLAN IT. INSTALL IT. HAND IT OVER.

A CONTROLLED PATH FROM RFQ TO COMPLETION

01 Scope review

Drawings, specifications, interfaces, access and programme requirements.

02 Planning

Methodology, resources, procurement, SWMS, ITPs and installation sequencing.

03 Mobilisation

Site-ready supervision, trades, plant, tooling and project controls.

04 Installation

Coordinated mechanical, structural, pipework and associated site works.

05 Verification

Inspections, test records, punch-list closeout and commissioning support.

06 Handover

Completion records, marked-up documentation, photos and closeout support.

WHERE WE WORK

Waste & recycling / Water treatment / Pump stations / Manufacturing
Civil infrastructure / Councils / EPC contractors / Consulting engineers
Remote & regional projects / Shutdowns & maintenance

SITE LEADERSHIP. SAFETY. QUALITY.

Boilermaker-led planning and practical supervision. Permits, pre-starts, daily records, progress photos, variation control and material or weld traceability where required.

LET'S GET TO WORK.

Send your drawings, RFQ or project scope.
